

DxF1.10(S) / DxF1.20(S) Series
Proportional Spring Return Actuators

Application

The **JOVENTA SPRING RETURN** electric damper-actuator series has been specially developed for the motorized operation of safety air dampers (anti-icing) in air conditioning systems, smoke evacuation dampers and sealing dampers. When the control signal is applied the actuator drives the damper to the operational position, while evenly tensioning the integrated spring. After a power failure the stored energy in the spring immediately brings the damper to the safety position. Manual operation is automatically cancelled when the actuator is in electrical operation. The compact design and universal adapter fitted with limitation of rotation angle make this actuator highly versatile.

Features

- 0(2)..10 V or 0(4)..mA control signal
- Up to 5 actuators in parallel operation possible
- Electrical connection with halogen-free cable
- Simple direct mounting with universal adapter on Ø 12 mm to 19 mm shaft or 10-12-14 mm square shaft.
An optional M9220-600 Jackshaft Coupler Kit is available for 19 to 27 mm round shafts, or 16, 18, and 19 mm square shafts
- 80 mm min shaft length
- Tandem Operation possible
- Limitation of rotation angle
- Manual positioning with crank handle
- 2 auxiliary switches, 1 adjustable (See back page for settings)
- Automatic shut-off at end position (overload switch)
- Energy saving at end positions
- Actuators available with 1 m halogen-free cable
- Devices meet CE requirements

Signal adjust Position

- Choose working field and position of position signal Y by rotary switch d1
- Processing sequence 1
Increasing the signal position from 0(2) to 10 V the damper opens.
- Method of functioning 1 «DW»
- Processing sequence 2
Decreasing the position signal from 10 V...2(0) the damper opens.
- Method of functioning 2 «UW»
- Y-position signal
Voltage: 0(2)...10 VDC or
Current: 0(4)...20 mA
Attention: The 500Ω resistance is mounted Outside of the tool.
(See the connection scheme)
- Factory-adjustment
The tools are adjusted by factory to 0...10 V and Method of functioning «DW».
- Calibration
If you set a rotation angle limit (e.g. 75°).
The position signal Y can be adapted to the rotation angle by using the switch d1 on CAL position.
- CAL adjustement
d1 on position 0...10 =
Y-Input 0...10V for 90°
d1 on position CAL =
 $10V:90^\circ = 0.11V \times 75^\circ = 8.33V$
d1 on position 2...10 =
Y-Input 2...10V for 90°
d1 on position CAL =
 $8V:90^\circ = 0.08V \times 75^\circ = 6.66V$

Setting the auxiliary switches

The 10S and 20S models include two integral auxiliary switches with a switch adjuster accessible on either face of the actuator.

The nominal factory setting for auxiliary switch S1 is 11° closing, and the nominal factory setting for auxiliary switch S2 is 81° opening.

The switch point of auxiliary switch S1 is fixed.

The switch point of auxiliary switch S2 is independently and continuously adjustable from 25° to 95°.

The switching position can be manually changed to any required position by turning the ratchet.

Limitation of rotation angle

Determine the desired rotation range.

If a 65° to 90° rotation range is desired, add one stroke limiting stop.

If a 35° to 60° rotation range is desired, add two stroke limiting stops.

Mount the stroke stop(s) in the desired position using the two M4 x10 mm selftapping screws provided. Tighten the screws to a torque of 4 Nm.

Manually reposition the coupler so that the coupler set screw aligns with the nodule guide that corresponds to the value determined in Step 2.

For a rotation range of 65°, mount one stroke limiting stops in the minimum stroke position.
